RED LIGHT THERAPY

Painless, non-invasive form of treatment
Help with healing and cellular regeneration.

Red Light therapy/ low laser therapy(LLT) is a painless, non-invasive form of treatment that uses specific wavelengths of light to **help with healing and cellular regeneration.**

For the skin, Our Light therapy has also been shown to increase collagen production, reduce scars and wrinkles, and minimize rosacea and skin irritations, such as acne.

Optimise Red light therapy is ultimate solution for your skin health, muscle recovery, healing and overall wellness. Optimise red light therapy is one of its kind and unbelievably good for your health!

DIAGNOSTICS

1. Wellness Profile

A wellness profile is like a health check-up that gives you the full scoop on your well-being! It pulls together a mix of tests and insights to help you understand your physical, mental, and emotional health, making it easier to live your best life.

2. Nutrition Profile

A nutrition blood test is your backstage pass to discovering how well your diet is fueling your body! It checks out your vitamin and mineral levels, helping you spot any gaps so you can level up your eating game and feel your best!

3. Allergy Profile

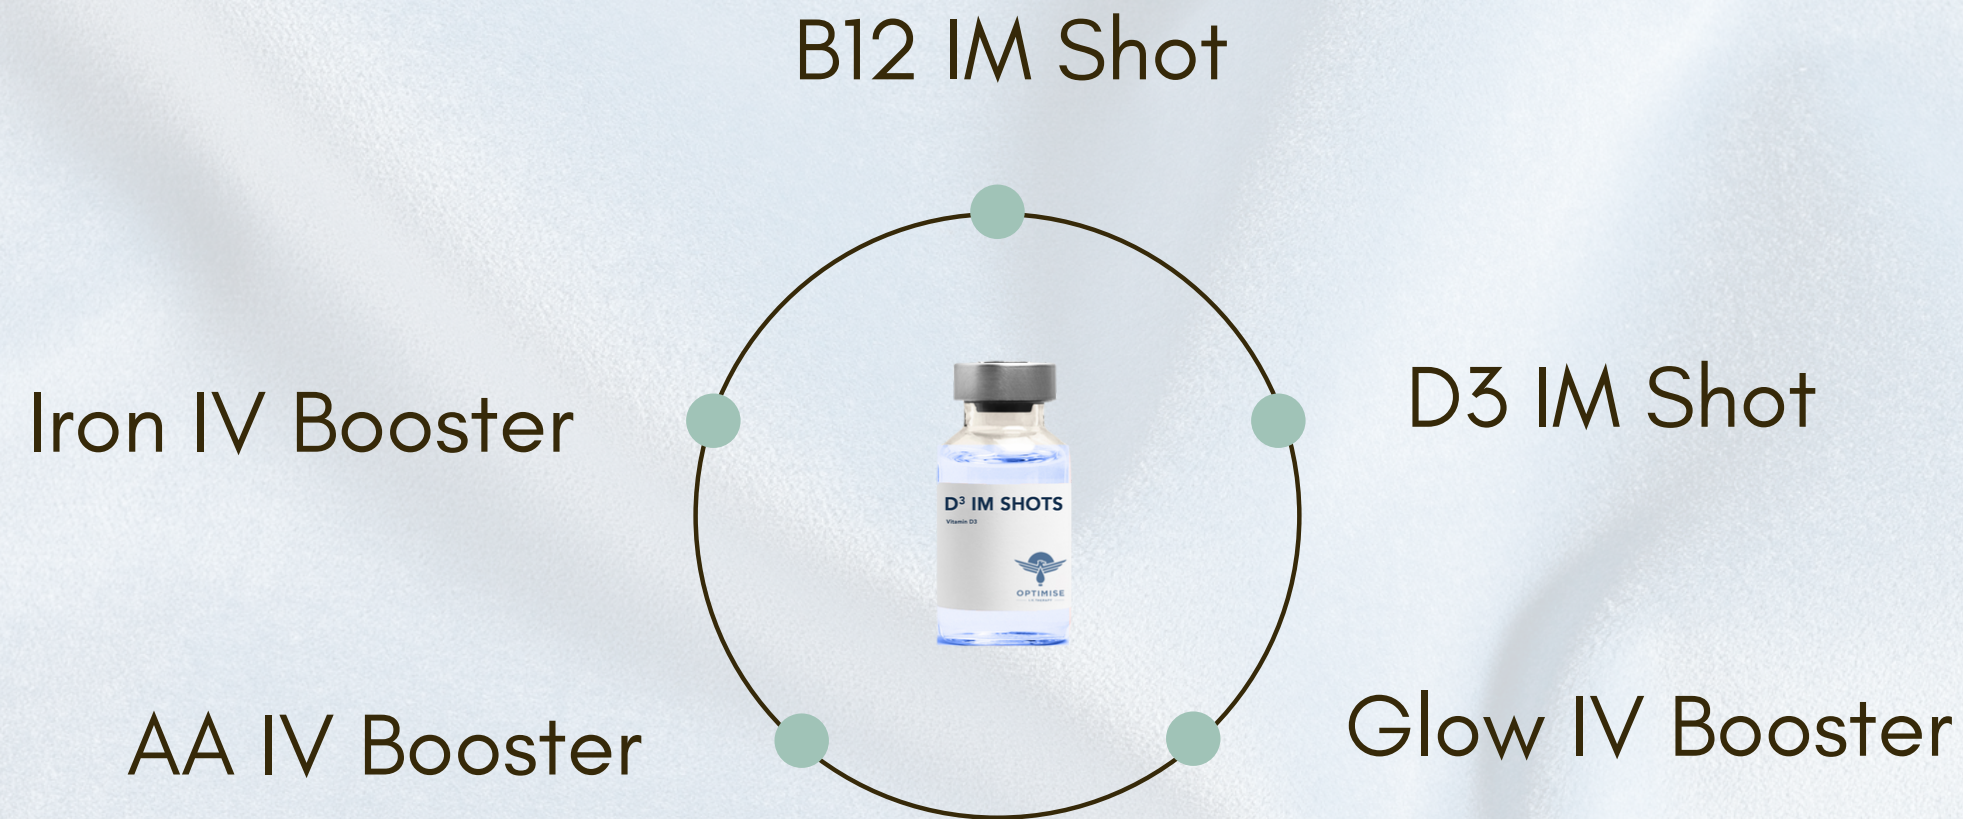

An allergy blood test is your secret weapon to uncovering what's behind those sneezes and itchiness! It checks for specific antibodies to pinpoint your unique allergens, empowering you to take charge of your allergies with style and confidence!

4. Breatheasy Profile

The breatheasy profile is your health check-up that shows how smoking is affecting you! It looks at nicotine levels and checks for oxidative stress and free radical damage, giving you a clear picture of your body's reaction. It's a great way to see how you can make healthier choices and feel better!

BOOSTER SHOT

An IV booster delivers concentrated nutrients or medications directly into the bloodstream to quickly enhance energy, immunity, and overall wellness, often used for rapid recovery and optimal health support.

FAQS

WHAT IS IV DRIP/THERAPY ?

IV(intravenous) therapy is the administration of essential micronutrients directly into the bloodstream through veins. Our IV therapies are crafted precisely according to your needs.

WHY IV DRIPS OVER ORAL PILLS?

Nutrients administered through oral pills have to go through the process of metabolism and absorption in the guts. Resulting in as low as 30 to 50% absorption of nutrients into the bloodstream. Also due to gut irritation high doses of nutrients can not be given orally. On the counter side, IV therapy delivers 90-100% of administered dose directly into the bloodstream bypassing all gut hustles and providing better bioavailability.

WHO CAN BENEFIT FROM IV THERAPIES?

IV(nutrition) therapy can benefit anyone who is experiencing nutrient deficiencies, chronic fatigue, stress, poor immune response, chronic illness, dull or dry skin, athletes/fitness enthusiasts facing slower recovery, feeling hungover, jetlag/ motion sickness issues, ladies with PMS, frequent travelers/ flyers, Stage performers.

IS RED LIGHT THERAPY SAFE?

Red light therapy is generally safe and painless. This form of healing is widely accepted and growing in popularity because it is all natural and non-invasive. LED light therapy is generally safe when administered under proper guidance.
